

Jeremiah Wangaruro

SENIOR DATA ENGINEER

jeremiah.ruro@gmail.com | linkedin.com/in/jeremiahwangaruro | jeremiahruro.com | Melbourne, VIC

PROFILE

Senior Data Engineer with 5+ years turning data into reliable, trusted assets that business teams can act on confidently. Currently leading the design and rollout of an automated data quality framework for Cartology's PlanIt retail-media platform, replacing manual release checks with automated gates so feature work ships faster with less risk. Prior work spans federated data governance at aPriori, Power BI analytics informing €2M+ marketing budget decisions at Civica, and productionisation of machine learning models at Sentireal. Comfortable bridging technical and business audiences across architecture, delivery, and stakeholder partnership.

CORE FOCUS

Data Platform Architecture

Analytics Engineering

Data Quality & Governance

Dimensional Modelling

Self-Service Analytics

Cloud Data Warehousing

Stakeholder Partnership

Technical Leadership

EXPERIENCE

Senior Data Consultant (Data & AI)

V2 AI · Cartology *PlanIt*

Apr 2026 – Present · Melbourne, VIC

Delivered data assurance solutions for a retail-media platform, focusing on data quality and governance.

- Architect and delivery lead of the Automated Data Assurance Framework, replacing manual data verification with automated quality checks for the PlanIt retail-media product to unblock faster, lower-risk releases.
- Designed the framework so additional Cartology products can be onboarded through configuration rather than rebuilding, protecting the investment and shortening time-to-value.
- Established Cartology's tiered Data Quality Standard, adopted as the Definition of Done for releases, with a graduated rollout (observe → warn → block) letting teams adopt at their own pace.
- Enabled multiple engineering teams to build and test data changes in parallel without interference, removing a recurring source of release-day delays.
- Made platform health visible to non-engineers: test coverage, performance, and quality trends now queryable as metrics rather than locked in tribal knowledge.
- Modernised the development toolchain, eliminating environment drift between developer machines and production while rolling out engineering standards without disrupting in-flight work.

Data Engineer

aPriori Technologies

Nov 2024 – Mar 2026 · Belfast, Northern Ireland

Driving data platform initiatives for a global manufacturing analytics company.

- Built and maintained the analytics data layer across three business domains, structuring source data into reporting-ready models teams could query directly with confidence.
- Designed a federated data governance model giving each business unit ownership of its data products while keeping standards consistent, scaling without bottlenecking on a central team.
- Built **data-platform-cli**, an internal tool standardising how teams launched new data products; setup time dropped from days to minutes and it became the engineering standard.
- Implemented attribute-based access controls across cloud environments, ensuring sensitive data reached only those with genuine need without slowing teams down.
- Led the migration of the data platform between cloud providers, preserving full functionality while optimising for cost and performance.
- Replaced a slow custom ingestion process with managed change-data-capture, removing latency in the data feeding business reports.

Data Scientist

Civica

Feb 2022 – Mar 2024 · Belfast, Northern Ireland

Delivered business intelligence and analytics solutions for public sector clients, focusing on customer insights and operational reporting.

- Built end-to-end analytics for Tourism Ireland's marketing function, from pipelines to Power BI dashboards, giving the team direct visibility into campaign performance without analyst tickets.
- Partnered with marketing stakeholders to define KPIs and dashboards that directly informed €2M+ in annual marketing budget allocation.
- Structured customer engagement data from Dynamics 365 into a reporting-ready model, making it queryable across the organisation.
- Modernised legacy analytics infrastructure for the Northern Ireland Appeals Service, materially improving report load times for case-management self-service analytics.
- Built interactive Power BI reports for legal and administrative teams, cutting ad-hoc reporting demand and freeing analysts for higher-value work.

Data Scientist

Sentireal

Nov 2020 – Feb 2022 · Belfast, Northern Ireland

Built machine learning pipelines and predictive models for a VR training simulation startup.

- Productionised the company's VR training analytics, moving experimental ML models into a reliable, automatically updating production service exposed via API.
- Identified the data features predicting VR training effectiveness, informing product decisions on what made training more impactful.
- Built and tuned predictive models and documented the workflow so the team could extend it independently.

SKILLS

Analytics Engineering

dbt Core, Elementary OSS, dbt_project_evaluator, dbt_expectations, dbt_utils, Great Expectations, SQLFluff, dimensional modelling (Kimball), slim CI, contracts, CDC, medallion architecture

BI & Reporting

Power BI Desktop/Service, DAX, SSAS, SSRS, Azure Synapse Analytics, self-service analytics design

Cloud

GCP (BigQuery, Cloud Composer), AWS (S3, Redshift, Lambda, ECS, MWAA, SageMaker), Azure (Synapse, Data Factory, SSAS), Docker, Git

Governance

Data Mesh, federated governance, ABAC IAM policies, metadata management, data quality SLAs, tiered quality standards, Definition-of-Done frameworks

Languages & Tooling

Python (Typer, Pydantic, FastAPI), Astral uv, SQL (BigQuery, Redshift, PostgreSQL, T-SQL), JavaScript/TypeScript, DAX, Bash

Orchestration & CI/CD

Apache Airflow (MWAA, Cloud Composer), Airbyte CDC, GitHub Actions, AWS CodePipeline

ML & Data Science

AWS SageMaker, Scikit-Learn, TensorFlow, feature engineering, ML pipeline CI/CD

EDUCATION

BSc Computer Science with Data Science

University College Dublin

2016 – 2020 · Second Class Honours, Grade 1 (2:1) · GPA 3.43 / 4.2

Data Science in Python, Programming for Big Data, Machine Learning, Statistical Analysis, Introduction to AI

PROJECTS & PUBLICATIONS

Recommender Systems in Virtual Learning Environments

Published, AI Journal

Investigated the application of conventional recommendation models in virtual learning environments.

Multi-criteria Recommender Systems

Comparative study on the effect of multi-criteria ratings on recommendation quality. Built with Python (Scikit-Learn, Pandas, SciPy) and SQL.
